# Office Action Summary

Application No.

10/523,917

Applicant(s)

GREY ET AL.

Examiner

Paul M. West

Art Unit

2856

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-26 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-26 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
  - 2) ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
  - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 11032005.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. As to claims 1, 2, 14, and 15, it is not clear what is meant by a signal with a monotonic group delay function. What is meant by monotonic? Is monotonic describing the group delay of the signal, or some other aspect of the signal such as the amplitude? Also, what is "the acquisition period" referring to?

4. As to claims 3 and 16, the phrase "most preferably" renders the claims indefinite. Are the limitations which follow this phrase meant to be included in the claim?

5. As to claims 4 and 17, what does the term "terfenite" mean? This does not appear to be a commonly used term.

6. As to claims 10 and 23, the terms " $F(\omega)$ " and " $H(\omega)$ " lack antecedent basis in the claim.

7. As to claims 11, 12, 24, and 25, what aspect of the signal is ramped up, i.e. is it ramping up the amplitude, frequency, etc.?

Art Unit: 2856

8. As to claims 13 and 26, it is unclear what is meant by "multiplying the signal."

What is the signal being multiplied by, or is it just generally increasing? What aspect of the signal is growing or attenuating, i.e. is it amplitude, frequency, etc.?

***Claim Rejections - 35 USC § 102***

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10. Claims 1, 5-10, 14, and 18-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Field.

11. As to claim 1, Field teaches a rheometer comprising: a driver 120 for applying an alternating movement to a surface of a sample 150 for causing an alternating movement of the sample; a force measuring device 160 for providing a signal indicative of the reaction force exerted by the sample on the driver; a displacement measuring device 170,180 for providing a signal indicative of the alternating movement of the sample 150; a processor 200 for receiving the force signal and the movement signal to determine a rheological property of the sample; and a signal generator 111 for supplying to the driver a frequency sweep signal having a group delay which is monotonic (Col. 6, lines 2-5).

12. As to claim 5, Field teaches the apparatus including a sample support comprising a top plate 130 and a bottom plate 140 which define a space for receiving the sample 150.

13. As to claim 6, the displacement measuring device 170,180 is a transducer.

14. As to claim 7, the force measuring device 160 is a load cell.

15. As to claim 8, the processor includes an analog to digital converter 176,191 for converting the signal from the load cell and the displacement measuring means to a digital signal.

16. As to claims 9 and 10, the processor is for determining the fourier transform of both the force signal and the movement signal and the ratio of the force fourier transform  $F(\omega)$  to the movement fourier transform  $H(\omega)$ , and the complex modulus is computed with the formula:  $G^*(\omega) = \frac{h^3}{3\pi a^4} \times \frac{F(\omega)}{H(\omega)}$ , where  $a$  is the radius of one of the plates and  $h$  is the average separation of the plates (Col. 2, lines 13-28).

17. As to claim 14, Field teaches a method of determining a rheological property of a sample, comprising: applying by a driver 120 and alternating movement to a surface of the sample 150 for causing alternating movement of the sample; measuring a force signal with force measuring means 160 indicative of a reaction force exerted by the sample; measuring a signal indicative of the alternating movement of the sample 150 by means of transducer 170,180; processing the force signal and the movement signal with processor 200 to determine the rheological property of the sample 150; and supplying

Art Unit: 2856

the driver with a frequency sweep signal having a group delay which is monotonic (Col. 6, lines 2-5).

18. As to claim 18, Field teaches the method including supporting the sample between a top plate 130 and a bottom plate 140 which define a space for receiving the sample 150.

19. As to claim 19, the displacement is measured by a transducer 170,180.

20. As to claim 20, the force is measured by a load cell 160,175.

21. As to claim 21, the processing in includes using analog to digital converters 191,176 to convert the force signal and displacement signals to digital signals.

22. As to claims 22 and 23, the processing further includes determining the fourier transform of both the force signal and the movement signal and the ratio of the force fourier transform  $F(\omega)$  to the movement fourier transform  $H(\omega)$ , and calculating the

complex modulus with the formula:  $G^*(\omega) = \frac{h^3}{3\pi a^4} \times \frac{F(\omega)}{H(\omega)}$ , where  $a$  is the radius of one of the plates and  $h$  is the average separation of the plates (Col. 2, lines 13-28).

### ***Claim Rejections - 35 USC § 103***

23. Claims 3, 11, 16, and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Field.

24. As to claims 3 and 16, Field is silent as to the size of the crest factors of the frequency sweep signal, however it would have been obvious to one of ordinary skill in the art to use a signal with small crest factors because it is well-known in the art that

Art Unit: 2856

small crest factors lead to less impacting and therefore reduce bearing wear in vibrating machinery, and signals with small crest factors are more accurately used with fourier transforms.

25. As to claims 11 and 24, Field teaches the frequency sweep signal consisting of reversing ramps (Col. 6, lines 2-5) but does not specifically say the signal is ramped up at the beginning and ramped down at the end. However, it would have been obvious to one of ordinary skill in the art to ramp the signal up at the beginning and down at the end because the signal must start from zero initially and therefore must be ramped up in the beginning to reach any higher values.

#### ***Allowable Subject Matter***

26. Claims 12 and 25 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***

27. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note that Isogai et al. teach a similar apparatus which uses a load cell, displacement sensor, and driver.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul M. West whose telephone number is (571) 272-8590. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hezron Williams can be reached on (571) 272-2208. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
